

## **Python Modules Practice**

1. Create a module to create following functions

- simple interest
- deposit
- withdrawl

Create a main file and set current balance= 50000 and perform following.

- Withdraw some amount and print remaining amount
- deposit 5000
- If balance is greater than 50000,give a interest of 5% and print updated amount.

2. Create a module to create following functions

- percentage
- result - based on percentage calculate pass/ fail , use if conditions
- display – Enrollment and Name

Create a main file from which pass total marks and no. Of subjects to percentage function. And print Enrollment, Name, percentage, result(Pass/Fail)
